

## NACO-L 3077

Slip and Leveling additive for solvent-borne coating systems, for improves leveling, prevents cratering, helps substrate wetting, acts as a defoamer and de-aeration aid, does not interfere with inter-coat adhesion. Furthermore, prevents floating/flooding of organic pigments in combination with TiO<sub>2</sub>.

### Product Data

#### Composition

Modified acrylic copolymer

#### Typical Properties

The values indicated in this data sheet describe typical properties and do not constitute specification limits.

**Physical form:** Clear light yellow liquid

**Active ingredients** ~30%

### Applications

#### Recommended Use

**Coating Industry, Printing Inks and Adhesives**

The additive is recommended for baking enamels based on alkyd, acrylic or polyester resins, polyurethane coatings, two-pack epoxy coatings, air-drying alkyd systems.

#### Recommended Levels

**Add 0.5 to 2% based on total formulation.**

\*The above recommended levels can be used for orientation. Optimal levels are determined through a series of laboratory tests.

#### Incorporation and Processing Instructions

For optimum performance, the additive must be incorporated at the end of the batch preparation.
