

NACO-DF 2022

Silicone and polymer-containing Defoamer/Air release additive for solvent-borne and solvent-free coatings, adhesives and sealants. Particularly recommended for epoxy resin systems.

Product Data

Composition

Solution of foam-destroying polymers and polysiloxanes

Typical Properties

The values indicated in this data sheet describe typical properties and do not constitute specification limits.

Non-volatile matter (20 min., 302 °F): 10 %

Solvents: Hydrocarbon mixture

Applications

Recommended Use

Coatings Industry

Protective coating systems, Industrial coatings, Architectural coatings, Wood and furniture coatings

Recommended Levels

Add 0.2 to 0.8% additive (as supplied) based upon total formulation.

The above recommended levels can be used for orientation. Optimal levels are determined through a series of laboratory tests.

Incorporation and Processing Instructions

To achieve optimal defoaming, the defoamer should be added already to the millbase. If incorporating at a later stage, sufficiently high shear forces must be applied to ensure a good distribution and to prevent cratering.
